Estimate Version 1 This Estimate Version has an estimate for year 2012

Description

Project is to supply electrical power to the Dry Ridge meter station and connection point of Line 1528 with Spectra's Texas Eastern Transmission line in Marshall County, West Virginia.

Project will: (1) acquire right of way for electric lines and poles; (2) clear this ROW; and (3) pay AEP or another contractor to construct and install a meter, electric lines, and 6 poles to supply electricity to the meter station.

This project will allow the discontinuance of paying \$22,000 per month for a rental electric generator at this site plus the cost of personnel to guard the site.

This project was part of the scope of work on the original Majorsville Compressor Station projects, but was greatly delayed by CNX's refusal to sell ROW for the power lines.
